On Building Metacognition Learning Strategies on Pre-Calculus Students

Dr. Karen Villaverde
New Mexico State University
Mathematical Sciences Department

Abstract: This talk is about the importance of building metacognition learning strategies on pre-calculus students. It is based on the educational research of Dr. Saundra McGuire and her recently published book “Teach Students How To Learn: Strategies You Can Incorporate into Any Course to Improve Metacognition, Study Skills, and Motivation.” I will present my ideas on how her learning strategies can be adapted to pre-calculus classes.
