**Abstract**

Environmental and Economic Accounting System (SEEA) mainly focuses on natural resources depletion, environmental degradation, and defensive expenditure. How to evaluate the environmental degradation is still a difficult problem in environmental accounting. In this talk, an improved method for calculating the governance cost coefficient of environmental degradation evaluation is proposed. This new method takes the consideration of both the emission standard and the governance difficulty, not the emission standard alone.

**Key words:** Environmental Accounting; Environmental Degradation Evaluation; Environmental Governance Costs; Environmental Pollution
